PROFESSIONAL SUMMARY

Unreal Engine developer with 6+ years of experience across gameplay, AI, multiplayer and VR, currently Team Lead at Future Studio Bangladesh. Builds production systems in C++ and Blueprint, leads and mentors engineering teams, and has led game releases on Steam and Meta Quest. Independently developed and published four Unreal Engine plugins on the Fab marketplace. Open to full-time, contract and remote roles internationally.

PROFESSIONAL EXPERIENCE

Team Lead | Future Studio Bangladesh

2024 – Present · Dhaka, Bangladesh

- Lead metaverse and VR development in Unreal Engine 5, owning technical direction and code review across the team.
- Build avatar systems, voice chat, virtual economies and social hubs for persistent multiplayer worlds.
- Partner with international teams on marketplace integration, networked features and gamified learning environments.
- Mentor engineers and set the coding standards and review process the team works to.

VR Developer | VincatsBD

2024 · Dhaka, Bangladesh / Seoul, South Korea (Remote)

- Developed Meta Quest VR experiences, including environments and interaction systems.
- Optimised VR applications to hold a stable frame budget on standalone mobile hardware.
- Collaborated with a South Korea-based team to refine VR gameplay and interaction design across time zones.

Senior Game Developer & Team Lead | SpinOFF Studio

2020 – 2024 · Dhaka, Bangladesh

- Led development of single-player narrative games, covering quests, storylines and core gameplay mechanics.
- Designed and programmed AI systems for player interaction and combat encounters.
- Profiled and optimised game performance, and led releases on Steam.
- Mentored junior developers and coordinated work across programming, art and design.

TECHNICAL SKILLS

Engines & Languages: Unreal Engine 4 / 5, C++, Blueprint, C, Java

Gameplay: Gameplay systems, character and combat mechanics, gameplay UI, level scripting

AI & Navigation: Behaviour Trees, EQS, perception, A* and Sparse Voxel Octree pathfinding, local LLM integration

Multiplayer: Replication, RPCs, server-authoritative gameplay, networked debugging

VR: Meta Quest / Oculus, interaction systems, locomotion, comfort and performance tuning

Graphics & Performance: Niagara VFX, materials, Lumen / Nanite, CPU and GPU profiling, optimisation

Tools & Plugins: Runtime and editor modules, Blueprint / C++ APIs, multithreading, asynchronous tasks

Workflow: Git, Perforce, Subversion, code review, Steam and Meta Quest release pipelines

Leadership: Team leadership, mentoring, technical direction, cross-discipline coordination

SELECTED GAME PROJECTS

PIXO — Open-world action adventure · Gameplay programmer · playpixo.gg

Contributing gameplay programming to an open-world action adventure built in Unreal Engine 5, featuring time-dilation abilities, traversal-focused movement and varied enemy encounters. Public playable demo available.

Bangladesh Liberation War Game — Government-sponsored historical game · Bangladesh ICT Game Project

Programmed gameplay features and resolved production bugs in collaboration with the project team.

FUBG — Online multiplayer game · Released on Steam

Contributed to gameplay mechanics, server integration and multiplayer debugging.

PUBLISHED UNREAL ENGINE PLUGINS

Four C++ plugins designed, built and published independently on the Fab marketplace, and used by other Unreal Engine developers.

KillBack Replay — Runtime killcam and replay system

Records recent gameplay in a rolling memory buffer and rebuilds it with visual replay proxies. Supports multiplayer killer-POV transfer, skeletal animation, audio, Niagara/VFX and HUD replay, plus playback controls, saved clips and Blueprint/C++ integration.

Local Mind AI — On-device language models for NPCs

Runs local language models in a crash-isolated process with automatic recovery. Provides streaming dialogue, vision input, gameplay tool calls, grammar-constrained JSON output and semantic memory through asynchronous Blueprint and C++ APIs.

AeroNav 3D — Volumetric AI navigation

3D pathfinding for flying, underwater and zero-gravity AI. Uses an editor-baked Sparse Voxel Octree, A* search and line-of-sight path smoothing, with multithreaded baking, asynchronous queries and a path-following component.

Infinity Local Sound AI — Offline sound generation in the Unreal Editor

Generates sound effects from text prompts on the local GPU using Vulkan, with a CPU fallback. Includes a non-destructive waveform editor and 24-bit WAV export, and runs entirely in the editor without adding a runtime module to packaged games.

EDUCATION

B.Sc. in Computer Science and Engineering — East West University, Dhaka, Bangladesh · 2024

CERTIFICATIONS

200-Hour Course Completion — ICT Division, Government of Bangladesh · 2022

LANGUAGES

Bangla — Native · English — Fluent (professional working proficiency)
