ABOUT ME

Unreal Engine developer with 6+ years of experience across gameplay, AI, multiplayer and VR, currently Team Lead at Future Studio Bangladesh. I build production systems in C++ and Blueprint, lead and mentor engineering teams, and have led game releases on Steam and Meta Quest. I have independently developed and published four Unreal Engine plugins on the Fab marketplace. Open to full-time, contract and remote roles internationally.

WORK EXPERIENCE

2024 - Present
Dhaka, Bangladesh

Team Lead

[Future Studio Bangladesh](#)

- Lead metaverse and VR development in Unreal Engine 5, owning technical direction and code review across the team.
- Build avatar systems, voice chat, virtual economies and social hubs for persistent multiplayer worlds.
- Partner with international teams on marketplace integration, networked features and gamified learning environments.
- Mentor engineers and set the coding standards and review process the team works to.

2024
Dhaka, Bangladesh /
Seoul, South Korea
(Remote)

VR Developer

[VincatsBD](#)

- Developed Meta Quest VR experiences, including environments and interaction systems.
- Optimised VR applications to hold a stable frame budget on standalone mobile hardware.
- Collaborated with a South Korea-based team to refine VR gameplay and interaction design across time zones.

2020 - 2024
Dhaka, Bangladesh

Senior Game Developer & Team Lead

[SpinOFF Studio](#)

- Led development of single-player narrative games, covering quests, storylines and core gameplay mechanics.
- Designed and programmed AI systems for player interaction and combat encounters.
- Profiled and optimised game performance, and led releases on Steam.
- Mentored junior developers and coordinated work across programming, art and design.

EDUCATION AND TRAINING

2024
Dhaka, Bangladesh

B.Sc. in Computer Science and Engineering

[East West University](#)

2022
Bangladesh

200-Hour Course Completion Certificate

[ICT Division, Government of Bangladesh](#)

LANGUAGE SKILLS

Mother tongue Bangla

Other language(s)

	Listening	Reading	Spoken production	Spoken interaction	Writing
English	C1	C1	C1	C1	C1

CEFR levels: A1-A2 basic • B1-B2 independent • C1-C2 proficient user

TECHNICAL AND PROFESSIONAL SKILLS

Engines & languages	Unreal Engine 4 / 5, C++, Blueprint, C, Java
Gameplay	Gameplay systems, character and combat mechanics, gameplay UI, level scripting
AI & navigation	Behaviour Trees, EQS, perception, A* and Sparse Voxel Octree pathfinding, local LLM integration
Multiplayer	Replication, RPCs, server-authoritative gameplay, networked debugging
VR	Meta Quest / Oculus, interaction systems, locomotion, comfort and performance tuning
Graphics & performance	Niagara VFX, materials, Lumen / Nanite, CPU and GPU profiling, optimisation
Tools & plugins	Runtime and editor modules, Blueprint / C++ APIs, multithreading, asynchronous tasks
Workflow	Git, Perforce, Subversion, code review, Steam and Meta Quest release pipelines
Leadership	Team leadership, mentoring, technical direction, cross-discipline coordination; remote collaboration with international teams across time zones

PROJECTS – PUBLISHED UNREAL ENGINE PLUGINS

Four C++ plugins designed, built and published independently on the Fab marketplace, and used by other Unreal Engine developers.

Fab marketplace	KillBack Replay — Runtime killcam and replay system Records recent gameplay in a rolling memory buffer and rebuilds it with visual replay proxies. Supports multiplayer killer-POV transfer, skeletal animation, audio, Niagara/VFX and HUD replay, plus playback controls, saved clips and Blueprint/C++ integration.
Fab marketplace	Local Mind AI — On-device language models for NPCs Runs local language models in a crash-isolated process with automatic recovery. Provides streaming dialogue, vision input, gameplay tool calls, grammar-constrained JSON output and semantic memory through asynchronous Blueprint and C++ APIs.
Fab marketplace	AeroNav 3D — Volumetric AI navigation 3D pathfinding for flying, underwater and zero-gravity AI. Uses an editor-baked Sparse Voxel Octree, A* search and line-of-sight path smoothing, with multithreaded baking, asynchronous queries and a path-following component.
Fab marketplace	Infinity Local Sound AI — Offline sound generation in the Unreal Editor Generates sound effects from text prompts on the local GPU using Vulkan, with a CPU fallback. Includes a non-destructive waveform editor and 24-bit WAV export, and runs entirely in the editor without adding a runtime module to packaged games.

PROJECTS – SELECTED GAMES

Ongoing playpixo.gg	PIXO — Open-world action adventure · Gameplay programmer Contributing gameplay programming to an open-world action adventure built in Unreal Engine 5, featuring time-dilation abilities, traversal-focused movement and varied enemy encounters. Public playable demo available.
Bangladesh ICT Game Project	Bangladesh Liberation War Game — Government-sponsored historical game Programmed gameplay features and resolved production bugs in collaboration with the project team.
Released on Steam	FUBG — Online multiplayer game Contributed to gameplay mechanics, server integration and multiplayer debugging.
