PROFESSIONAL SUMMARY

Unreal Engine developer with 6+ years of experience, currently Team Lead at Future Studio Bangladesh. Focused on C++ and Blueprint gameplay, AI systems, multiplayer and VR. Led Steam game releases and independently developed and published four Unreal Engine plugins on Fab.

PROFESSIONAL EXPERIENCE

Team Lead

2024 - Present

Future Studio Bangladesh | Dhaka, Bangladesh

- Lead metaverse and VR development in Unreal Engine.
- Build avatar systems, voice chat, virtual economies and social hubs for persistent multiplayer worlds.
- Work with international teams on marketplace integration, networked features and gamified learning environments.

VR Developer

2024

VincatsBD | Dhaka, Bangladesh

- Developed Meta Quest VR experiences, including environments and interaction systems.
- Optimized VR applications for stable performance.
- Worked with a South Korea-based team to develop and refine VR gameplay.

Senior Game Developer & Team Lead

2020 - 2024

SpinOFF Studio | Dhaka, Bangladesh

- Led development of single-player narrative games, including quests, storylines and gameplay mechanics.
- Designed and programmed AI systems for player interactions.
- Optimized game performance and led game releases on Steam.
- Mentored junior developers and coordinated work across disciplines.

TECHNICAL SKILLS

Gameplay	Unreal Engine 5, C++ / Blueprint, AI systems, multiplayer, gameplay UI, VR (Meta Quest / Oculus), performance optimization
Plugins & tools	Runtime and Editor modules, Blueprint / C++ APIs, multithreading, asynchronous tasks, replay and killcam systems
AI & navigation	Local LLM integration, NPC dialogue, Sparse Voxel Octrees, A* pathfinding
Development	Git, Subversion (SVN), C, Java (Swing), Cinema 4D
Leadership	Team leadership, mentoring, project management, Steam publishing

Mohammed Tasfiquir Rahman

Team Lead & Game Developer

PUBLISHED UNREAL ENGINE PLUGINS

Four C++ plugins published on [Fab](#), covering replay systems, local AI and 3D navigation.

KillBack Replay

Runtime killcam and replay system

Records recent gameplay in a rolling memory buffer and rebuilds it with visual replay proxies. Supports multiplayer killer POV transfer, skeletal animation, audio, Niagara/VFX and HUD replay, plus playback controls, saved clips and Blueprint/C++ integration.

Local Mind AI

Local LLM integration for NPCs

Runs local language models in a separate process with automatic recovery. Provides streaming dialogue, vision input, gameplay tool calls, structured JSON output and semantic memory through asynchronous Blueprint and C++ APIs.

AeroNav 3D

Volumetric AI navigation

Provides 3D pathfinding for flying, underwater and zero-gravity AI. Uses an editor-baked Sparse Voxel Octree, A* search and path smoothing, with multithreaded baking, asynchronous queries and a path-following component.

Infinity Local Sound AI

Offline sound generation in the Unreal Editor

Generates sound effects from text prompts on the local GPU using Vulkan, with a CPU fallback. Includes waveform editing and 24-bit WAV export. Runs entirely in the editor, without adding a runtime module to packaged games.

SELECTED GAME PROJECTS

Bangladesh Liberation War Game

Government-sponsored historical game | Bangladesh ICT Game Project

Programmed gameplay features and fixed bugs in collaboration with the project team.

FUBG

Online multiplayer game | Released on Steam

Contributed to gameplay mechanics, server integration and multiplayer debugging.

EDUCATION

B.Sc. in Computer Science and Engineering

2024

East West University | Dhaka, Bangladesh
